

Why Doctors Keep Ignoring the Most Important Organ in Your Body

New evidence shows that the most life-giving organ in your body—
your colon—is totally out of whack!

When ignored, it causes a never-ending cycle of health problems, including:

- Gas and bloating
- Abdominal pain
- Low energy
- Itchy skin and acne
- Constipation and diarrhea
- Indigestion
- Urinary and bowel troubles
- Bad breath
- Anxiety, headaches, mood swings
- Yeast problems
- Colds and immune problems
- and much, much more!

What Yale Med School doctors say to do now to fix your colon problems. See pg. 2

Medical Experts From The Mayo Clinic, Harvard Medical School,
Yale, and MIT All Say,

"Death Begins in the Colon"

You'll probably be just as surprised to find out this news as doctors were at a recent Yale Medical School conference. The nation's top gastro intestinal doctors and colon experts said to throw everything you know about treating digestive problems out the window.

Scientists cited 61 scientific studies that prove how these microscopic "good bacteria" are miraculously helping everything from constipation and gas to intestinal infections and diarrhea. They told America's astonished doctors, "*Give your patients probiotics NOW...before it's too late!*"

Doctors and researchers now know — without a doubt — that even if you have mild digestive symptoms such as gas, bloating, belching, spastic colon, ulcers, irritable bowels, constipation or others — then you most likely probably have even MORE serious problems brewing in your body. That's because...

80 PERCENT of your immune cells are in your intestines.

Your friendly flora actually TRIGGER your immune cells to defend your body from toxins, pathogens, parasites and poisons!

**It's CRITICAL that you clean out your colon now
and restore the balance of good flora.**

One Look and You'll See why these Medical Experts Agree...

1. Packed-in, old, dead fecal matter up inside your colon **KILLS OFF YOUR GOOD FLORA** needed for good digestion.

2. This toxic mess **TRIGGERS AN EXPLOSION OF BAD BACTERIA GROWTH** (shown in black dots) into the *billions* causing constipation, stomach pain, bad breath, diarrhea, gas, bloating and more.

3. Your overloaded colon **DUMPS TOXINS INTO YOUR BLOODSTREAM** that poison every organ in your body!
